

Step 1- Have the USB flash drive memory stick provided at hand.

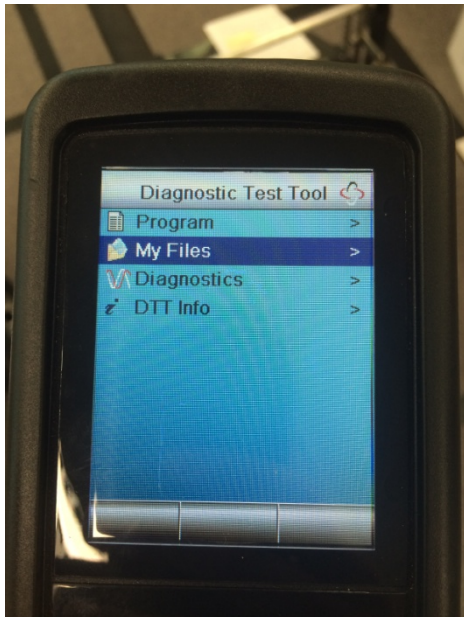

Step 2- Turn the power to the ZX-1 on and then plug the DTT handheld programmer into the joystick.

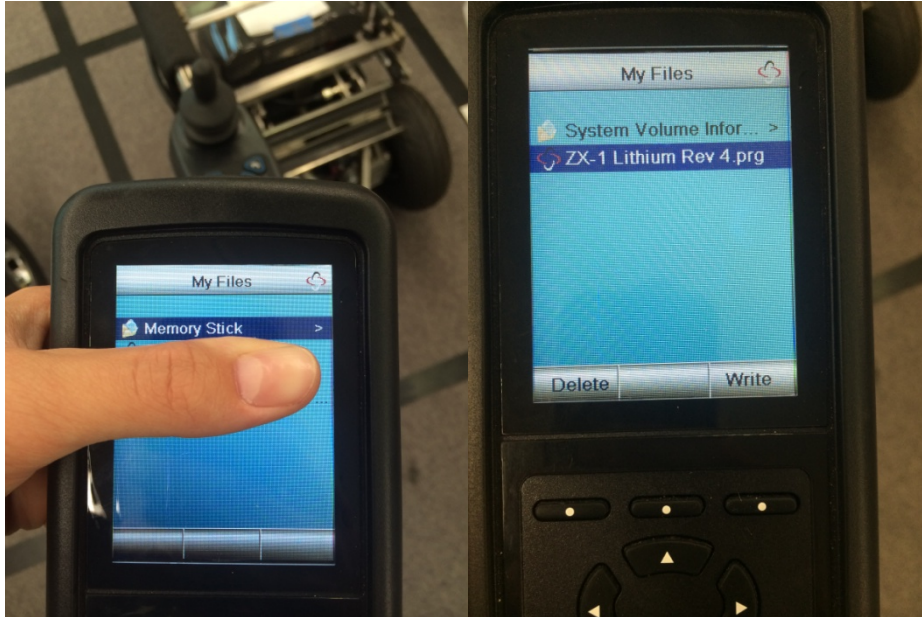

Step 3- Insert the flash drive into the bottom of the DTT handheld programmer. There is a USB port next to where the regular coiled cable inserts.

Step 9- Press the down arrow on the DTT programmer to go to "My Files".

Step 10- Press the right arrow to view the files. You will then go to "Memory Stick" and press the right arrow to view the files on the memory stick.

Step 11- Press the down arrow to go to "ZX-1 Lithium Rev 4.prg", then press the button to write the file to the ZX-1. There will be several notifications that appear on the screen as it programs. To all of the notifications that appear you will press the button for "Yes". After it has finished programming, press the left arrow until you are back at the home screen. Once you are back at the home screen you may now unplug the programmer from the ZX-1 and unplug the flash drive from the programmer.
